

RUGUMAHO BLOG

Master Account Credentials Handover Document
Strictly Confidential | Prepared for Ariane Rugumaho

1. Master Credentials Overview

All services running the Rugumaho blog platform have been set up under a single master account coordinate. This keeps operations unified in one inbox, allowing you to access and configure every component using the unified credentials below:

Platform Service	Portal / URL	Master Email / User	Master Password
1. Vercel hosting	vercel.com	arianeblogger@gmail.com	Ariane200@.
2. Resend Email API	resend.com	arianeblogger@gmail.com	Ariane200@.
3. Cloudflare DNS	cloudflare.com	arianeblogger@gmail.com	Ariane200@.
4. ImageKit CDN	imagekit.io	arianeblogger@gmail.com	Ariane200@.
5. Sanity CMS Project	sanity.io/manage	arianeblogger@gmail.com	Ariane200@.
6. Admin Dashboard	rugumaho.com/admin/login?key=ariane-secret-token	arianeblogger@gmail.com (or 'arianeblogger')	Ariane200@.

2. Critical Security Actions (Post-Handover)

To ensure long-term security, we recommend performing the following actions after taking over the accounts:

- **Enable 2-Factor Authentication (2FA):** Enable 2FA on Google (for your arianeblogger@gmail.com inbox) and Cloudflare. This is your single most important layer of security.
- **Keep your Secrets private:** Never share the ``.env.local`` variables or write tokens publicly. If anyone gains access to your Sanity write token, they can delete or modify your posts and subscribers database.
